\*\*\*

Publicat pentru prima dată pe 5 octombrie 2023

*Dacă un vaccin experimental ar afecta inima și sistemul imunitar la un număr semnificativ de indivizi care l-au primit, este posibil ca acesta să ducă la o scădere a dimensiunilor populației totale.*

**Acest lucru se poate întâmpla din mai multe motive.**

- În primul rând, afectarea inimii ar putea duce la o creștere a bolilor cardiovasculare, care are o cauză principală de mortalitate la nivel mondial. Acest lucru ar putea duce la un număr mai mare de decese în rândul persoanelor care au primit vaccinul.
- În al doilea rând, deteriorarea sistemului imunitar ar putea face persoanele mai susceptibile la alte infecții și boli, care ar putea contribui, de asemenea, la creșterea mortalității.
- Nu în ultimul rând, impactul negativ al vaccinului asupra fertilității și sănătății reproducerii ar putea duce la o scădere a numărului de nașteri, contribuind și mai mult la o scădere a dimensiunilor populației totale.

**Dacă un astfel de vaccin ar fi dezvoltat și distribuit, ar putea duce la depopulare din cauza mortalității crescute și a scăderii fertilității.**

**Din păcate, lumea s-a trezit într-o situație în care instituții și guverne puternice au constrâns milioane de oameni să obțină un vaccin experimental Covid-19 care provoacă toate efectele nefaste menționate mai sus.**

**Rapoartele oficiale ale Guvernului și documentele confidențiale Pfizer o dovedesc.**

**Prin urmare, asistați la depopularea în masă care se desfășoară în fața ochilor voștri.**

**Împingerea pentru vaccinarea în masă împotriva Covid-19 nu a fost niciodată despre combaterea unui virus. Era vorba despre reducerea populației globale.**

**Acest obiectiv se aliniază cu interesele anumitor corporații și indivizi puternici care vor beneficia de o populație mai mică și mai gestionabilă acum că AI este suficient de avansată pentru a înlocui sute de milioane de lucrători.**

Indiferent de cauza specifică, implicațiile a ceea ce se întâmplă în prezent în lumea reală sunt semnificative.

**Milioane au „murit brusc”**

Știați că datele privind decesele în exces în 15% din țările lumii pot fi găsite pe site-ul Organizației [pentru Cooperare și Dezvoltare Economică \(OCDE\)](#) ?

Aceasta include țări importante precum SUA, Canada și Marea Britanie.

În plus, am putut extrage și mai multe date actualizate despre 28 de țări europene din [EuroMOMO](#).

Toate aceste informații au fost furnizate [OCDE](#) și [EuroMOMO](#) de către organizațiile guvernamentale din fiecare țară, cum ar fi Centrele pentru Controlul Bolilor din SUA și Oficiul pentru Statistică Națională din Marea Britanie.

Următorul grafic ilustrează tendința tulburătoare a deceselor în exces în țările „Cinci Ochi” (Australia, Canada, Noua Zeelandă, Marea Britanie și IA), precum și în alte 27 de țări europene –

Sunteți conștient de numărul uluitor de decese în exces care au avut loc în SUA și Europa în ultimii ani?

În 2021, SUA au înregistrat aproape 700.000 de decese în exces, cu alte 360.000 de decese în exces până pe 11 noiembrie 2022.

Europa a avut un exces de 382.000 de decese alarmant în 2021, cu 309.000 de decese în exces până în noiembrie 2022.

Și aceste cifre nici măcar nu includ Ucraina!

În mod șocant, chiar și țări precum Noua Zeelandă, Australia și Canada au înregistrat decese în exces, care nu au scăzut de la lansarea vaccinului Covid-19.

Următorul grafic ilustrează tendința tulburătoare a deceselor în exces în Australia în 2020, 2021 și până în săptămâna 30 din 2022 -

Știați că lansarea vaccinului Covid-19 în Australia a dus la o creștere șocantă cu 747% a deceselor în exces, de la 1.303 în 2020 la 11.042 în 2021?

Iar de atunci situația s-a înrăutățit.

Până la sfârșitul lunii iulie 2022, au existat 18.973 de decese în exces în Australia - o creștere cu 1.356% față de 2020.

Adică mai multe decese în exces în 7 luni decât în ultimii doi ani combinați.

Și situația din SUA este la fel de alarmantă -

Sunteți conștient de tendința tulburătoare a deceselor în exces în SUA în urma lansării vaccinului Covid-19?

Până în săptămâna 38 din 2022, încă 1.700 de persoane au murit în comparație cu aceeași perioadă din 2020, iar până în săptămâna 38 din 2021, cu 109.000 de persoane mai șocante au murit în comparație cu aceeași perioadă în 2020.

Aceste cifre indică faptul că, în loc să scadă, decesele au crescut de fapt după lansarea vaccinului.

Următoarele două grafice ilustrează numărul total de decese în exces în „Cinci ochi” și în Europa de la începutul anului 2021, când a fost introdus vaccinul Covid-19 -

Știați că peste 1,8 milioane de decese în exces au avut loc în „Cinci Ochi” și în cea mai mare parte a Europei de la lansarea vaccinului Covid-19?

Această cifră șocantă include peste 1 milion de decese în exces în SUA și peste 690.000 de decese în exces în Europa, conform Centrelor pentru Controlul Bolilor și Organizația pentru Cooperare și Dezvoltare Economică, precum și un număr semnificativ de decese în exces în Australia, Canada, și Noua Zeelandă.

Narațiunea oficială conform căreia vaccinul este sigur și eficient și ar reduce numărul de decese este complet contrazisă de aceste cifre, care sugerează că vaccinurile Covid-19 ar putea fi principala cauză a deceselor în exces.

### Copiii/Adolescenții și tinerii adulți au „murit brusc”

Știați că decesele în exces în rândul copiilor cu vârste între 0 și 14 ani din Europa au crescut vertiginos cu 755% între ianuarie și septembrie 2022, potrivit datelor oficiale?

Această creștere alarmantă, care a determinat Uniunea Europeană să lanseze o anchetă, a avut loc în ciuda eforturilor [EuroMOMO](#) de a minimiza cifrele.

Este demn de remarcat faptul că vaccinul Pfizer Covid-19 a fost aprobat pentru utilizare la copii de către Agenția Europeană a Medicamentului la 28 mai 2021. Care a fost săptămâna 21 din 2021.

## First COVID-19 vaccine approved for children aged 12 to 15 in EU

News 28/05/2021

EMA's human medicines committee (CHMP) has recommended granting an extension of indication for the COVID-19 vaccine [Comirnaty](#) to include use in children aged 12 to 15. The vaccine is already approved for use in adults and adolescents aged 16 and above.

Sursă

Apoi, decesele în exces „numai „întâmplător” au început să fie înregistrate din săptămâna 22, odată cu acordarea acestei autorizații de utilizare în caz de urgență.

În general, decesele în exces au crescut cu 630% de la aprobarea vaccinului pentru utilizare la copii până în septembrie 2022.

Este o realitate tristă că, în ciuda dovezilor tot mai mari care indică pericolul clar al vaccinării împotriva Covid-19 pentru copii, este foarte puțin probabil ca autoritățile să recunoască acest risc.

În mod tragic, creșterea semnificativă a deceselor în exces în rândul copiilor din Europa de când Agenția Europeană pentru Medicamente a aprobat vaccinul pentru utilizarea în această populație este probabil să fie respinsă ca doar o altă „coincidență” în lista lungă de astfel de apariții de la începutul pandemiei.

Este vital să continuăm să examinăm și să examinăm datele pentru a ne asigura că sănătatea și bunăstarea copiilor noștri sunt protejate.

Știați, de asemenea, că, potrivit [cifrelor oficiale publicate în liniște de Centrele pentru Controlul Bolilor \(CDC\) din SUA](#), aproape o jumătate de milion de copii și adulți tineri au murit până la 9 octombrie 2022 în SUA, de când Administrația pentru Alimente și Medicamente a acordat pentru prima dată autorizația de utilizare de urgență pentru un vaccin Covid-19?

Această evoluție sfâșietoare a dus la aproape 118.000 de decese în exces comparativ cu media 2015-2019.

Cifrele arată, de asemenea, că au existat 7.680 de decese în exces în rândul copiilor și adulților tineri în 2022 până acum, comparativ cu același interval de timp din 2020, la apogeul presupusei pandemii de Covid-19.

Cu toate acestea, cel mai rău an pentru decesele în rândul persoanelor cu vârsta între 0 și 44 de ani a fost 2021, cu 291.461 de decese în exces în total, cu aproape 60.000 mai multe decât au avut loc în 2020.

Potrivit cifrelor oficiale ale CDC, această creștere s-a datorat în principal unei creșteri bruște misterioase a deceselor în rândul copiilor și adulților tineri, începând cu săptămâna 31 din 2021.

Este o realitate sfâșietoare că aproape o jumătate de milion de oameni cu vârsta cuprinsă între 0 și 44 de ani au murit din săptămâna 51 din 2020, ceea ce a dus la un exces uimitor de 117.719 decese în comparație cu media pe cinci ani 2015-2019.

Conform datelor oficiale, speranța medie de viață în SUA a fost de 77,28 ani în 2020.

Dacă trebuie să credem narațiunea oficială conform căreia Covid-19 este o boală mortală, atunci este probabil de înțeles că 231.987 de copii și adulți tineri până la vârsta de 44 de ani au murit în 2020, ducând la 40.365 de decese în exces ca o consecință nefericită a acestei presupuse boli.

Cu toate acestea, dacă trebuie să acceptăm narațiunea oficială conform căreia vaccinurile Covid-19 sunt sigure și eficiente, cum explicăm creșterea în continuare a deceselor în rândul copiilor și adulților tineri atât în 2021, cât și în 2022?

Este demn de remarcat faptul că milioane de americani au fost forțați să primească vaccinuri, iar milioane de părinți au fost forțați în mod similar să-și forțeze copiii să primească injecțiile.

Răspunsul este clar: **narațiunea oficială este o minciună flagrantă**. Vaccinurile Covid-19 nu sunt nici sigure, nici eficiente.

Datele greu de găsit furnizate de CDC doar *indică* această tendință tulburătoare a deceselor tinerilor americani, dar alte date publicate de guvernul Regatului Unit o *confirmă*.

De exemplu, un raport publicat pe 6 iulie 2022 de Biroul pentru Statistică Națională din Regatul Unit, o agenție guvernamentală, oferă dovezi suplimentare cu privire la pericolul acestor vaccinuri.

The report is titled '[Deaths by Vaccination Status, England, 1 January 2021 to 31 May 2022](#)', and it can be accessed on the ONS site [here](#), and downloaded [here](#).

Have you seen Table 2 of the report by the UK's Office for National Statistics, which contains the monthly age-standardized mortality rates by vaccination status by age group for deaths per 100,000 person-years in England up to May 2022?

If not, you should take a look, because the figures it contains are truly disturbing.

We've taken the data provided by the ONS for January to May 2022 and created the following chart, which illustrates the devastating consequences of the mass Covid-19 vaccination campaign.

The chart shows the monthly age-standardized mortality rates by vaccination status among 18 to 39-year-olds for Non-Covid-19 deaths in England between January and May 2022.

It's clear from this data that the risks associated with these vaccines cannot be ignored.

[Source](#)

It's a disturbing trend: in every single month since the start of 2022, partly vaccinated and double vaccinated 18-39 year-olds have been more likely to die than unvaccinated 18 to 39-year-olds.

The situation has been particularly dire for triple-vaccinated 18 to 39-year-olds, whose mortality rate has worsened month by month since the mass Booster campaign that took place in the UK in December 2021.

In January, triple-vaccinated 18 to 39-year-olds were slightly less likely to die than unvaccinated individuals in this age group, with a mortality rate of 29.8 per 100,000 among the unvaccinated and 28.1 per 100,000 among the triple-vaccinated.

However, from February onwards, triple-vaccinated 18 to 39-year-olds were 27% more likely to die than unvaccinated individuals, with a mortality rate of 26.7 per 100k among the triple-vaccinated and 21 per 100k among the unvaccinated.

The situation worsened even further by May 2022, with triple vaccinated 18 to 39-year-olds 52% more likely to die than unvaccinated individuals in this age group, with a mortality rate of 21.4 per 100k among the triple vaccinated and 14.1 among the unvaccinated.

The partly vaccinated also fared poorly, with May seeing partly vaccinated 18 to 39-year-olds 202% more likely to die than unvaccinated individuals in this age group.

The report by the UK's Office for National Statistics also includes mortality rates for children, although the UK government attempted to conceal this data.

The following chart shows the mortality rates by vaccination status per 100,000 person-years among children aged 10 to 14 in England for the period 1st January 2021 to 31st May 2022 –

Source

According to the UK's Office for National Statistics, the mortality rate for Covid-19 deaths among unvaccinated children aged 10 to 14 is 0.31 per 100,000 person-years.

However, for one-dose vaccinated children, the mortality rate is 3.24 per 100,000 person-years, and for triple-vaccinated children, the mortality rate is an alarming 41.29 per 100,000 person-years.

The situation is no better when it comes to non-Covid-19 deaths. The all-cause death mortality rate is 6.39 per 100,000 person-years among unvaccinated children and slightly higher at 6.48 among partly vaccinated children.

However, the rate worsens with each additional injection: the all-cause death mortality rate is 97.28 among double-vaccinated children and an alarming 289.02 per 100,000 person-years among triple-vaccinated children.

This means, according to the UK government's own official data, double-vaccinated children are 1422% or 15.22 times more likely to die of any cause than unvaccinated children, while triple-vaccinated children are 4423% or 45.23 times more likely to die of any cause than unvaccinated children.

The data provided by the Office for National Statistics, which is age-standardized and rates per 100,000 population, is definitive proof that Covid-19 vaccines increase a person's risk of death.

It's no surprise, then, to learn that a secret CDC report confirms that nearly half a million American children and young adults have died following the Covid-19 vaccine rollout, resulting in nearly 118,000 excess deaths compared to the 2015-2019 five-year average.

### You Only Have One Heart & It Will Not Regenerate

The potential consequences of a COVID-19 vaccine that harms the heart are dire. If such a vaccine were widely distributed and administered to a significant portion of the population, it could lead to millions of sudden deaths.

The heart is a vital organ that plays a critical role in maintaining the body's proper functioning, so any adverse effects on it could have disastrous consequences.

Unfortunately, at least two Covid-19 vaccines produced by Pfizer and Moderna do exactly this, and they have now been administered to millions of people multiple times, and it is likely that these vaccines are responsible for the millions of excess deaths recorded worldwide since their rollout.

Guidance

# Myocarditis and pericarditis after COVID-19 vaccination: clinical management guidance for healthcare professionals

Updated 21 March 2022

Source

The risk of myocarditis, an inflammation of the heart muscle that can lead to sudden death if not treated, is a serious concern when it comes to the Covid-19 vaccine. This is especially true for young and healthy adults and children, who may not experience any symptoms of myocarditis until the condition has progressed to a severe stage.

Symptoms of myocarditis can include chest pain, shortness of breath, fatigue, and abnormal heart rhythms, and if left untreated, it can result in heart failure, cardiac arrest, and sudden cardiac death.

This is likely why an investigation of official figures published by Public Health Scotland in April 2022 found that there has been a 67% increase compared to the historical average in the number of people aged 15 to 44 experiencing heart attacks, cardiac arrest, myocarditis, stroke, and other cardiovascular diseases since this age group was offered the Covid-19 vaccine.

Source

Source

Unfortunately, a study conducted by the US Centers for Disease Control (CDC) and Food and Drug Administration (FDA) has shown that the risk of myocarditis following mRNA COVID vaccination is around 133x greater than the background risk in the population.

#### Original Investigation

January 25, 2022

### Myocarditis Cases Reported After mRNA-Based COVID-19 Vaccination in the US From December 2020 to August 2021

Source

This means Covid vaccination increases the risk of suffering myocarditis, an autoimmune disease causing inflammation of the heart, by 13,200%.

It is clear from the data presented that the Covid-19 vaccines produced by Pfizer and Moderna have had a significant impact on the health of millions of people worldwide.

The potential adverse effects on the heart, including myocarditis and an increased risk of heart attacks, cardiac arrest, and other cardiovascular diseases, could lead to a significant number of sudden deaths if these vaccines are widely distributed and administered to a significant portion of the population.

Additionally, the high number of excess deaths that have occurred since the rollout of the Covid-19 vaccines suggests that these vaccines may be contributing to a larger trend of depopulation.

Excess deaths refer to the number of deaths above what would normally be expected in a given population, and the fact that there have been millions of excess deaths in the "Five Eyes" countries and Europe since the rollout of the Covid-19 vaccine is a cause for concern.

The potential consequences of depopulation are far-reaching and could have significant impacts on society, including economic disruption and a decrease in the overall population size. It is imperative that further research is conducted to understand the true extent of the impact of the Covid-19 vaccines on population health and to ensure that any future vaccines are thoroughly tested and deemed safe before being distributed.

Obviously, it stands to reason that more people need to be dying than are being born for depopulation to take place. And unfortunately, confidential Pfizer documents confirm this is now our reality.

#### The Confidential Pfizer Documents

The data contained in this document is alarming and raises serious concerns about the safety of the Pfizer Covid-19 vaccine during pregnancy and lactation. According to the data, there have been numerous cases of pregnant women experiencing adverse reactions to the vaccine, including miscarriages, stillbirths, and other serious complications.

Furthermore, the data suggests that the vaccine may also pose risks to breastfeeding infants. There have been numerous reports of infants experiencing adverse reactions to the vaccine when it is passed to them through their mother's milk.

These findings are extremely concerning and highlight the need for further research into the safety of Covid-19 vaccines during pregnancy and lactation. If the risks associated with these vaccines are not properly addressed, it could have significant implications for fertility rates and overall population numbers.

It is imperative that authorities take these concerns seriously and conduct thorough investigations into the safety of Covid-19 vaccines during pregnancy and lactation. The health and well-being of both mothers and their children must be a top priority.

Pfizer's COVID-19 vaccine has been linked to a high number of adverse reactions in pregnant women. According to the company's own data, of the 270 known cases of exposure to the vaccine during pregnancy, 46% of the mothers (124) experienced an adverse reaction.

Of these, 75 were considered serious, including uterine contractions and fetal death.

This means that 58% of the mothers who reported adverse reactions suffered a serious event. These troubling findings raise concerns about the safety of the vaccine for pregnant women and highlight the need for further research.

- 146 non-serious mother cases reported exposure to vaccine in utero without the occurrence of any clinical adverse event. The exposure PTs coded to the PTs Maternal exposure during pregnancy (111), Exposure during pregnancy (29) and Maternal exposure timing unspecified (6). Trimester of exposure was reported in 21 of these cases: 1st trimester (15 cases), 2nd trimester (7), and 3rd trimester (2).
- 124 mother cases, 49 non-serious and 75 serious, reported clinical events, which occurred in the vaccinated mothers. Pregnancy related events reported in these cases coded to the PTs Abortion spontaneous (25), Uterine contraction during pregnancy, Premature rupture of membranes, Abortion, Abortion missed, and Foetal death (1 each). Other clinical events which occurred in more than 5 cases coded to the PTs Headache (33), Vaccination site pain (24), Pain in extremity and Fatigue (22 each), Myalgia and Pyrexia (16 each), Chills (13) Nausea (12), Pain (11), Arthralgia (9), Lymphadenopathy and Drug ineffective (7 each), Chest pain, Dizziness and Asthenia (6 each), Malaise and COVID-19 (5 each). Trimester of exposure was reported in 22 of these cases: 1st trimester (19 cases), 2nd trimester (1 case), 3rd trimester (2 cases).

Source – Page 12

It is alarming that Pfizer's own data shows that 124 out of 270 pregnant women who were exposed to the Pfizer COVID-19 vaccine experienced an adverse reaction. Of those, 75 were considered serious, including fetal death.

It is also concerning that Pfizer has no information on the outcomes of 238 out of 270 pregnancies. These figures raise serious questions about the safety of the Pfizer COVID-19 vaccine for pregnant women and their fetuses.

The findings of [another Pfizer study](#) on Wistar Han rats show that the Pfizer COVID-19 vaccine accumulates in the ovaries over time.

The ovaries are a pair of female glands that produce eggs and the female hormones estrogen and progesterone.

The [study](#), which can be found in the list of confidential Pfizer documents published by the US Food and Drug Administration (FDA) under a court order, administered a single dose of the Pfizer vaccine to 21 female and 21 male rats.

The researchers measured the concentration of total radioactivity in the blood, plasma, and tissues of the rats at various points after the injection was administered. The accumulation of the vaccine in the ovaries raises concerns about its potential impact on fertility and reproductive health.

Sample	Total Lipid concentration (µg lipid equivalent/g [or mL]) (males and females combined)						
	0.25 h	1 h	2 h	4 h	8 h	24 h	48 h
Lymph (mandibular)	0.064	0.189	0.290	0.408	0.534	0.554	0.727
Lymph node (mesenteric)	0.050	0.146	0.530	0.489	0.689	0.985	1.37
Muscle	0.021	0.061	0.084	0.103	0.096	0.095	0.192
Ovaries (females)	0.104	1.34	1.64	2.34	3.09	5.24	12.3
Pancreas	0.081	0.207	0.414	0.380	0.294	0.358	0.599

Spinal cord	0.043	0.097	0.169	0.250	0.106	0.085	0.112
Spleen	0.334	2.47	7.73	10.3	22.1	20.1	23.4
Stomach	0.017	0.065	0.115	0.144	0.268	0.152	0.215
Testes (Males)	0.031	0.042	0.079	0.129	0.146	0.304	0.320
Thymus	0.088	0.243	0.340	0.335	0.196	0.207	0.331
Thyroid	0.155	0.536	0.842	0.851	0.544	0.578	1.00
Uterus (females)	0.043	0.203	0.305	0.140	0.287	0.289	0.456
Whole blood	1.97	4.37	5.40	3.05	1.31	0.909	0.420
Plasma	3.97	8.13	8.90	6.50	2.36	1.78	0.805
Blood: plasma ratio	0.815	0.515	0.550	0.510	0.555	0.530	0.540

One of the most concerning findings from the study on the Pfizer Covid-19 vaccine is the fact that it accumulates in the ovaries over time.

In the first 15 minutes following injection, the total lipid concentration in the ovaries measured 0.104ml, but this increased to 1.34ml after just one hour, 2.34ml after four hours, and 12.3ml after 48 hours.

While the scientists conducting the study did not continue their research beyond 48 hours, it's unclear whether this concerning accumulation continued.

These findings raise serious questions about the potential long-term effects of the Pfizer vaccine on fertility and reproductive health.

But according to data published by Public Health Scotland, the number of people suffering from ovarian cancer has significantly increased in 2021 compared to the previous year and the 2017-2019 average.

This could potentially be linked to the accumulation of the Pfizer COVID-19 vaccine in the ovaries, as found in a study on rats.

Ovarian Cancer – Source

Newborn baby deaths in Scotland have also reached a critical level for the second time in just seven months, according to [official figures](#).

The rate of neonatal deaths in March 2022 was 4.6 per 1,000 live births, a 119% increase from the expected rate of deaths.

Source

This means the neonatal mortality rate exceeded an upper warning threshold known as the “control limit” for the second time following the rollout of Covid-19 vaccines to women / pregnant women.

The last time it exceeded this limit was in September 2021, when neonatal deaths per 1,000 live births reached 5.1. These levels are on par with those typically seen in the late 1980s.

At the time, PHS said the fact that the upper control limit has been exceeded “*indicates there is a higher likelihood that there are factors beyond random variation that have contributed to the number of deaths that occurred*”.

This news is shocking and raises serious concerns about the safety of Covid-19 vaccines.

### Increased Mortality

It's alarming to see in figures found in a report published by the UK Government titled '*Deaths by Vaccination Status, England, 1 January 2021 to 31 May 2022*', and it can be accessed on the ONS site [here](#), and downloaded [here](#), that in every single month between January and May of 2022, individuals aged 18 to 39 who were either partly or fully vaccinated were more likely to die from non-Covid causes compared to their unvaccinated counterparts.

The situation is particularly dire for triple-vaccinated individuals, whose mortality rates have only worsened month after month since the widespread booster campaign in December 2021.

These shocking figures, provided by the UK's Office for National Statistics, confirm that the Covid-19 vaccines significantly increase a person's risk of death.

It's clear that the vaccines are not only failing to protect individuals, but they are actively causing harm. It's crucial that action is taken to halt their distribution and investigate the true dangers they pose.

But this situation isn't isolated to 18 to 39-year-olds. It's common among every single age group.

The following two charts show the monthly age-standardised mortality rates by vaccination status for non-Covid-19 deaths in England between January and May 2022 for all age groups –

### Depopulation by COVID-19 Vaccination

The potential consequences of the Covid-19 vaccination campaign are alarming and could lead to depopulation on a global scale.

The heart is a vital organ and any adverse effects on it could have devastating consequences. This is especially true for young and healthy adults and children, as myocarditis may not cause any symptoms until the condition has progressed to a severe stage.

Data from Pfizer reveals that 46% of pregnant women who received the vaccine suffered adverse reactions, with 58% experiencing serious adverse events ranging from uterine contraction to fetal death.

Moreover, studies have shown that the vaccine accumulates in the ovaries over time, raising concerns about its potential impact on fertility.

Official figures also reveal that mortality rates are highest among the vaccinated and lowest among the unvaccinated population in every age group.

With all of this evidence, it is clear that the Covid-19 vaccination campaign could have serious consequences for the future of humanity.

### But Why?

There are various reasons that some people may want to depopulate the planet.

One reason could be overpopulation, as some people believe that the earth's resources are being depleted at an unsustainable rate due to the increasing population.

Other people may argue that depopulation is necessary due to the negative impact that humans have had on the environment, and reducing the population could help mitigate some of these problems.

Some people may also advocate for depopulation due to concerns about the impact of climate change, as a smaller population would likely lead to a reduction in greenhouse gas emissions.

Finally, some people may simply believe that a smaller population would be more manageable and easier to control, and may advocate for depopulation for this reason.

**Klaus Schwab and Bill Gates** are two powerful figures who have expressed support for the idea of depopulation through various means, including vaccination.

Schwab, the founder of the World Economic Forum, has argued that reducing the global population would be beneficial for the environment and the economy, and has suggested that advanced technologies such as artificial intelligence could play a role in achieving this goal.

Similarly, Bill Gates has stated that vaccination campaigns can be used to reduce the population, and has funded numerous initiatives that promote vaccination as a means of controlling population growth.

So it should now begin to make sense as to why powerful figures like Bill Gates and Klaus Schwab have been advocating for widespread vaccination campaigns.

The push for mass Covid-19 vaccination isn't about combating a virus, but about reducing the global population.

This goal aligns with the interests of certain corporations and individuals who stand to benefit from a smaller, more manageable population.

## The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project "destroys people's lives". He provides a comprehensive analysis of everything you need to know about the "pandemic" — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

*"My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the "deadly" COVID-19 "vaccine". This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument."*

### Reviews

*This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon*

*In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia*

*In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden "plandemic"; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test — which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig*

*Professor Chossudovsky exposes the truth that "there is no causal relationship between the virus and economic variables." In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —David Skripac*

*A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. —Edward Curtin*

ISBN: 978-0-9879389-3-0, Year: 2022, PDF Ebook, Pages: 164, 15 Chapters

Price: ~~\$44.50~~ FREE COPY! [Click here \(docsend\)](#) and download.
